

Spectrotel Firewall as a Service (FWaaS)

Enterprise-Grade Security. Simplified.

As networks evolve and workforces become more distributed, traditional on-premise firewalls can no longer keep up. Spectrotel's Firewall as a Service (FWaaS) delivers enterprise-grade protection through a cloud-native, fully managed platform. It provides centralized, always-on security without the complexity of managing hardware, licensing, or updates helping your organization stay secure and agile wherever users connect.

The Spectrotel Advantage

- **Cloud-Delivered Protection:** All security inspection and policy enforcement happens in the cloud, delivering uniform protection across branches, remote users, and cloud workloads.
- **Always-On Management:** Spectrotel continuously monitors, maintains, and updates your firewall environment to ensure the latest security intelligence and maximum uptime.
- **Scalable and Flexible:** Grow or contract instantly without waiting for hardware procurement or on-site installations. FWaaS adapts as your network evolves.
- **Predictable Costs:** Replace CapEx-heavy firewall refresh cycles with an all-inclusive monthly service that covers deployment, management, and support.
- **Single Pane of Glass:** Manage policies and visibility from one platform reducing complexity, ensuring consistency, and simplifying compliance.

Spectrotel Firewall as a Service (FWaaS)

Why FWaaS Matters

Spectrotel FWaaS modernizes enterprise network security by replacing fragmented, device-based approaches with a unified, cloud-based solution. It eliminates the need for on-premise firewall hardware and allows your security posture to scale effortlessly across users, locations, and cloud applications.

- Secure access for remote and hybrid workforces from anywhere, on any device.
- Simplified management and policy enforcement across distributed environments.
- Instant scalability without hardware refresh cycles or site-by-site deployments.
- Reduced operational overhead through fully managed updates, patches, and configurations.
- Consistent protection for branch offices, data centers, and cloud workloads.
- Faster deployments and centralized visibility for IT teams of any size.

Features and Benefits

- Cloud-native, hardware-free firewall protection for all network edges.
- Unified policy enforcement across users, locations, and cloud environments.
- 24x7 monitoring and management through the Spectrotel Network Intelligence Center (NIC).
- Built-in threat prevention, intrusion detection, and SSL inspection.
- Zero-touch provisioning and centralized change management.
- Predictable monthly billing with bundled support and lifecycle management.
- Optional co-management for customers who wish to retain policy control.
- Integrated service with Spectrotel connectivity and SD-WAN for simplified operations.

Elevate Your Network Security Experience

Simplify your security operations, eliminate hardware constraints, and gain the agility your business demands. With Spectrotel Firewall as a Service, you get enterprise-grade protection that grows with you—without the complexity or cost of traditional solutions.
