SPECTROTEL

Optimizing Connectivity
Don't Let Network Failures Disrupt Your Business!
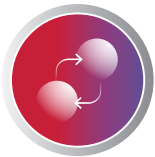

Wireless Internet Backup is a key business continuity solution

Businesses can't afford network downtime. With wireless backup, you get automatic failover to keep operations running if your primary connection fails.

Your Network, Uninterrupted: Add a Wireless Backup SD-WAN Bundle for Always-On Connectivity

With faster speeds and the broader capacity of 5G, wireless internet is a great failover technology for other broadband connections to raise the overall service availability and provide seamless connectivity, particularly when coupled with SD-WAN service or a seamless failover device.

Why Choose Wireless Backup Bundles?

Seamless Failover:
Automatically switches to a wireless connection during primary network outages, minimizing disruptions to your business operations.

Faster Speeds:
With the broader capacity of 5G, wireless internet offers faster speeds, enhancing overall service availability.

Fast Deployment:
Wireless services can be installed in as little as 24 hours, ensuring immediate connectivity, with full failover capabilities once the primary service is deployed.

Bandwidth Optimization:
Combine SD-WAN and wireless connections to optimize bandwidth and balance loads effectively when 5G unlimited is included.

A Solution that's Right for You!

Whether you manage your own network, have a small office or are ready to outsource your SD-WAN, Spectrotel has the Wireless Backup Bundle for you. Select the bundle that meets your business needs, and Spectrotel will do the rest to get you the connectivity you need that keeps your business running when other networks fail.

Keep your business running smoothly and avoid network failures. Add one of Spectrotel's wireless backup bundles to your SD-WAN for uninterrupted connectivity and total peace of mind.

SOHO Bundle

Ideal for a small business or home office that has appropriate application layer security on the endpoint Spectrotel's wireless device provides seamless failover if the primary connectiion is interrupted.

Broadband Primary (IOC/IOF)*
- Minimum 100Mbps download

IOW Secondary
- Wireless Data Plan 4G/5G

Wireless Device
- Cradlepoint L950 4G
- Cradlepoint W1850 5G

Auto Power Reboot

Low as **$171**

Up to **$338**

SD-WAN Bundle

Ideal for customers who have a network firewall, this option uses SD-WAN to provide seamless failover, includings rerouting of inbound initiated traffic to public IP addresses such as web or email servers.

Broadband Primary (IOC/IOF)
- Minimum 100Mbps download

IOW Secondary
- Wireless Data Plan 4G/5G

Wireless Device
- BEC MX-200Ae 4G
- Inseego FX-2000e 5G

Auto Power Reboot
Managed SD-WAN
- Bigleaf 150/BG75 E108

Low as **$251**

Up to **$407**

Secure SD-WAN Bundle

Ideal for customers ready to upgrade their security solution and connectivity. It has the advantages of SD-WAN failover and industry leading Fortinet UTM protection firewall operating in the same device.

Broadband Primary (IOC/IOF)
- Minimum 100Mbps download

IOW Secondary
- Wireless Data Plan 4G/5G

Wireless Device
- BEC MX-200Ae 4G
- Inseego FX-2000e 5G

Auto Power Reboot
Managed Secure SD-WAN
- Fortinet FG-40F Gateway

Low as **$229**

Up to **$385**

Wireless Bundle

Ideal for Customers who already have firewalls or SD-WAN devices that can provide automatic failover to Internet over Wireless (IOW) if IOC/IOF service is interrupted.

Broadband Primary (IOC/IOF)
- Minimum 100Mbps download

IOW Secondary
- Wireless Data Plan 4G/5G

Wireless Device
- BEC MX-200Ae 4G
- Inseego FX-2000e 5G

Auto Power Reboot

Low as **$154**

Up to **$309**

* Internet over Cable/Fiber

Terms & Conditions

Example pricing shown is based on a minimum service speed of 100 Mbps. Higher pricing may apply for higher bandwidth services. Professional Installation included for standard installations. Promo pricing applies to new customers and/or new deployments only with all three services added. 5G service available only where qualified. 4G plans are limited up to 5GB of data. All three service elements – 1. IOC, or IOF 2. IOW back up service, 3. managed mobile router, firewall or SD-WAN – are required for promotion pricing to apply. If the primary service (IOC or IOF) is determined to be unavailable at that location during provisioning, a Spectrotel service substitute (with the appropriate price adjustment) must be included for the promotion to apply.

The Spectrotel Difference

Leveraging more than 25 years coordinating and managing disparate carriers and networks, Spectrotel is pioneering the Next Generation Aggregator provider class to source and integrate best-in-class components and uniquely craft comprehensive integrated solutions. We dig deep to understand specific business requirements and take an expansive approach to recommend the optimal technology mix to minimize risk, optimize resources and technology, and modernize the enterprise.
